

Data Science Internship

IILM University, Greater Noida

Student Name: Dhruv Chauhan

Enrollment Number: 25SCS1003002664

Program: B.Tech Computer Science & Engineering

Organization: Thiranex

Dhruv Chauhan

Roll No

25SCS1003002664

Program

B.Tech Computer Science & Engineering

Branch

Data Science

University

IILM University, Greater Noida

Internship Overview

Organization

Thiranex

Domain

Data Science

Duration

4 Weeks — 26 July to
25 August 2026

Mode

Virtual

Mentor

Thiranex

INTERSHIP WORK

Projects

A hands-on journey through four core Data Science projects — from raw data to real-world insights.

Project 1: Data Cleaning & Visualization

Objective

Work on a raw dataset to clean, process, and visualize insights — transforming messy data into meaningful stories.

Expected Outcome

Learn data preprocessing, visualization, and storytelling with data.

Missing Values & Outliers

Handle duplicates, nulls, and anomalies in raw datasets

Python Libraries

Pandas, Matplotlib, and Seaborn for processing and plotting

Visual Reports

Create dashboards and visual summaries of key findings

Project 2: Predictive Modeling Using Machine Learning

ML Algorithms

Apply Linear Regression, Decision Trees, and Random Forest to structured datasets

Train & Test

Split data into training and testing sets to evaluate model accuracy and performance

Performance Metrics

Visualize results using confusion matrices and ROC curves for clear evaluation

Expected Outcome: Gain hands-on experience in supervised learning and model evaluation techniques.

Project 3: Exploratory Data Analysis (EDA)

Objective

Analyze a dataset to uncover patterns, trends, and hidden relationships within the data.

Key Techniques

- Statistical summaries and descriptive analytics
- Correlation heatmaps and distribution plots
- Identifying key influencing factors

Expected Outcome

Develop analytical thinking and robust data exploration skills.

Project 4: Real-World Data Project

Finance

Analyze stock prices and market trends for predictive financial modeling

Health

Work with patient records to identify patterns and support clinical decision-making

Retail

Examine sales data to forecast demand and uncover consumer behavior insights

Perform end-to-end data analysis or prediction and present findings with visualizations and conclusions — applying data science skills in real-world contexts.

Skills & Tools

Programming

Python

Data Processing

Pandas, NumPy

Visualization

Matplotlib, Seaborn

Machine Learning

Scikit-learn, TensorFlow

Analysis

Statistical Analysis, EDA Techniques
